Ubiquity

Cloud Ready Architecture

Fully Funded
# Assessment Service

Infrastructure Assessments

The right cloud strategy starts with a proper foundation. The reality is, all of your infrastructure will not move to the cloud, so it's more important than ever to ensure you have the proper infrastructure that will securely enable your journey to the cloud. Our Cloud Infrastructure Assessments will evaluate your infrastructure, identify opportunities to improve, and develop a Blueprint to move you from where you are today, to where you want to go.

- Assess your server, storage, network or converged infrastructure for optimal design
- Virtualization Healthcheck
- Exchange, SQL Assessments

SERVER ASSESSMENT

System Memory Consumption by Server
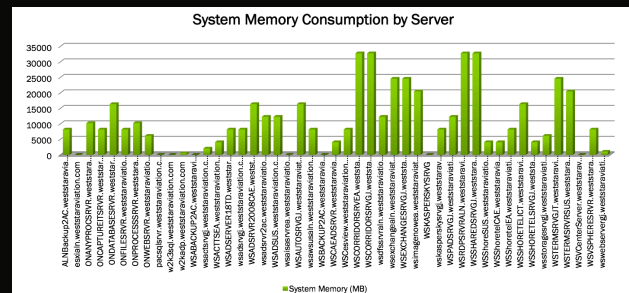

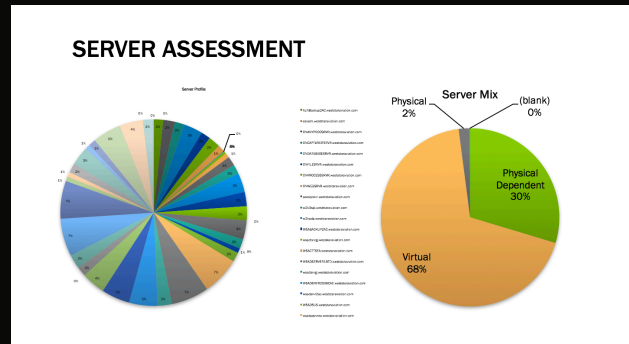

Cloud Suitability Assessments

Not all workloads are created equal. What cloud platform works well for some applications might be problematic for others. With so many different cloud solutions, providers, service levels, management approaches, and costs, how do you know what is the best-fit for each workload? Our cloud suitability assessment is designed to identify what applications are suitable for which types of cloud solutions, right down to the inter application dependencies and security requirements that must be considered.

CLOUD READY BLUEPRINTS

Storage Assessments

- Storage performance and capacity assessment
- Block and file optimization assessments
- Hyper-converged use-case assessments

Backup Assessments

- Understand what backups are actually running by server and job
- Understand Backup storage performance
- Understand Backup network performance
- Understand effect of deduplication on backups

## Cloud Ready Architecture

Vulnerability Assessment

- Analyze and Prioritize threats

- Identify immediate security requirements

- Develop an end-to-end security blueprint

- Identify opportunities to build security into the overall network fabric

Enterprise WAN Assessment

Discover what Software-Defined WAN can do for your business to drastically reduce cost, improve availability, and increase performance. The benefits of SDWAN, or Intelligent WAN (IWAN) services will look different for each organization. We will evaluate your entire telecommunications strategy, including contracts and billing, along with your infrastructure requirements to build an SDWAN strategy that works for your business.

- Evaluate your telecom carrier options for every location

- Evaluate options for leveraging Software-Defined WAN solutions for increased availability, higher performance, and lower cost.
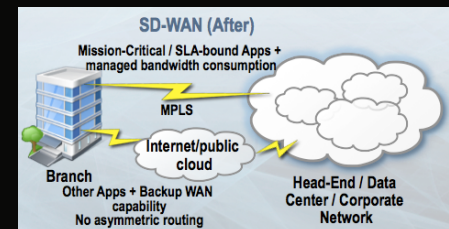

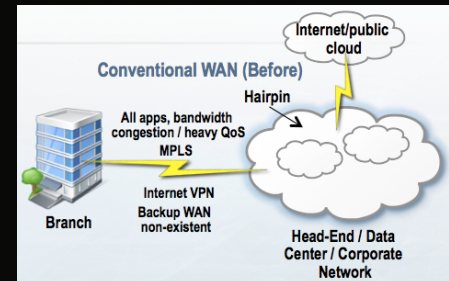

Cisco Assessments

- Cisco Cloud Readiness

- Cisco Network Assessment

- Cisco Security Assessment

- Cisco Data Center and Hyper-Converged Assessment

- Cisco End of Life and End of Service report
    - Create a roadmap for refreshing equipment before it goes end of life
    - Map all of your equipment to the latest solutions accompanied with data sheets.

- Cisco SMARTnet reporting
    - Create a roadmap to refresh equipment before it goes end of support.
    - Consolidate contracts by service level
    - Clean up contract access to ensure the right people have access and the wrong people do not.
    - Ensure the appropriate coverage is on the correct equipment.
    - Ensure accuracy of your equipment list and avoid maintenance on equipment that had been decommissioned.
    - Turn your SMARTnet into proactive support vs. reactive break/fix.

- Service Grid - Multi-vendor support contract management

Cloud Ready Architecture

Company Background

Ubiquity was developed from the ground up to be focused on building and optimizing Infrastructures that enable our clients' journey to the cloud, regardless of where they are today, how extensive they are interested in leveraging cloud technologies, and how quickly they are looking to adopt these new capabilities.

We enjoy the dynamics of building client's networks and data center technologies as well as enabling other technology partners to build and transform their own practices.

While we are focused on the technology side of enablement, our process and methodology is firmly rooted in understanding how business works and adding measurable business value through technology optimization.

Ubiquity delivers results. Our goal is to provide a superior customer experience and tremendous business value for our customers.

Practice Areas

Cloud
- Cloud-Optimized Solutions
- Hybrid, Private, Public Cloud Infrastructure

Data Center
- Converged Infrastructure
- Storage
- Hyper-Converged
- Colocation

Secure Networking
- Enterprise WAN
- Enterprise Networks

Enterprise Collaboration

Secure Enterprise Mobility

Virtual Office Solutions

Capabilities

Consulting

Assessments

Design and Architecture

Implementation

Optimization

Managed Services
